

### **Gulfco Marine Maintenance (previous CC estimate: FY11)**

The Responsible Parties (RPs) for this site are completing a Remedial Investigation (RI) and Feasibility Study (FS) under a Unilateral Administrative Order. Regulatory agency comments on the draft Baseline Ecological Risk Assessment (BERA) have been sent to the RPs, and the RI Report is currently under review. Both the BERA and the RI Report are expected to be completed in April 2011.

A removal action was recently completed by the RPs under a Consent Order to remove the above ground storage tanks at the site. The tanks have been removed, and the only remaining action is to dispose of six roll-off containers with waste materials that still remain on-site. These containers are expected to be sent for disposal by the end of March 2011.

Completion of the Feasibility Study Report is expected by May 2011. A public meeting is planned for July 2011, with a Record of Decision scheduled for September 2011. Based on current site knowledge, and no additional construction work is identified, construction completion is expected in September 2011. (*Green 2011*)
